

# **Fluorescence Emission Spectra of Kidney Cancer**

D.K. Kendre

## **Abstract:**

In emission spectra, 280 nm is kept constant excitation and we record the fluorescence spectra of same organs of Malignant & Normal tissue of kidney cancer. Both the curve compares with each other and determined in the intensity ratio of cancer to normal kidney tissue. We also determine the band structure of kidney cancer.

**Keyword :** Kidney cancer tissue (Malignant & Normal), fluorescence emission spectra.
