Abstract: Enhancing the precision and effectiveness of laboratory work in healthcare settings is the aim of the Clinical Laboratory Management Application. Test records must be kept up to date in every clinical laboratory, and creating reports in the right format may be challenging. Lab staff sometimes have difficulties in handling the financial aspects of patient testing. By providing a user-friendly solution that streamlines record-keeping and report generating, our program tackles these problems. The goal of this application is to improve the manual maintenance of healthcare data records. Processes like inventory management, result reporting, sample monitoring, and regulatory compliance are all streamlined by this program. In addition to supporting quality improvement initiatives, Clinical Laboratory Management's features—such as user-friendly interfaces, automated workflows, and robust security measures—also boost operational efficiency, which eventually improves patient outcomes and increases the effectiveness of the healthcare delivery system.

Keywords: Sample Tracking, Quality Control, Report data management, Automatic report generation, Data security.

1. Introduction

Numerous elements pertaining to patient test management are included in this program. Lab technicians may simplify test management by using this program. Additionally, this program creates the report, which is simply shared by email, Whatsapp, and other messaging apps. This program keeps track of test history by date. Patient bills are also generated using the "Clinical Laboratory Management app." Additionally, it provides details regarding the patients' overall testing. Another benefit of this program for lab workers is the ability to modify the test price based on his viewpoint. The goal of this software solution is to improve the manual maintenance of healthcare data records.[1] It is quite difficult to manually manage the reports and report history. This program solves this issue by keeping all report records in a real-time database. Additionally, this tool ensures flexibility in pricing management by making it simple for lab workers to alter test costs depending on laboratory regulations or market circumstances. The goal of this program is to improve patient care by streamlining operations and managing laboratory workflow. This tool facilitates communication with the lab technician by creating a visually appealing graphical user interface. This application will make it easier for patients to visit the clinical lab, which will be beneficial in terms of business practices.

2. Literature Review

2.1 Summary of Medical Report Maker PDF:

You may easily produce the medical report you want with Medical Report Maker PDF. The Medical Report Maker PDF app makes it simple to distribute reports via email, social media, and messaging applications. It also enables you to publish reports online using Android phones and tablets. The newest method for creating reports worldwide is called Medical Report Maker PDF. With the app, you can use your smartphone to produce all of your ads at any time and from any location. Doctors can create reports with ease thanks to this software. Reports may be created, shared, or printed in PDF format [2].

Features of Medical Report Maker PDF:

- 1) Form entry data, Form filter report data
- 2) Generate the PDF report on your phone and email it on-site.

- 3) Send an image report with Email, SMS, WhatsApp.
- 4) CBC Report.
- 5) Compatible with all Android 8 devices.

2.2 Summary of Free Path Lab Software:

Low cost and simple lab administration. A user-friendly interface, several lab schedules, personalized templates, batch management, and digital test results are just a few of the sophisticated features of this program. Additionally, it streamlines laboratory operations and improves patient care by increasing automation in the process. For any pathology laboratory in India, managing clinical laboratory reports with normal values and test data is free [3].

Features of Free Path Lab Software:

- 1) This software is a powerful database.
- 2) The owner can make a report on the laboratory tests of the patients done in the laboratory.
- 3) Here we can enter additional information needed to write a patient report while looking at output data.
- 4) All test reports can be saved to test history.

2.3 Summary of Medical Report & Rx Maker:

A straightforward and easy-to-use mobile application called Medical Report and Rx Maker was created to make the process of producing medical reports easier. It's simple to send generated reports (PDF) via email or messaging apps. Encourage patients and clinical laboratory personnel to communicate. Clinical laboratory findings may be readily imported and managed for patients using Medical findings and Rx Builder. Patient data is quickly and securely stored. Using Rx Maker to apply drug reports is a novel approach to improve clinical practice's accuracy and efficiency. All health reports are managed by this program. The Health Report and History of Rx Maker app allows you to read reports as well.

The existing manual report preparation system will be replaced by the Health Report and Rx Maker Create project, which will become a report creation system. When creating clinical reports, the free Clinical Report and Rx Maker program offers features including cell count, normal range, test name, and data. The mobile pharmacy app Medical Reports and Rx Maker is a great way to create medical reports and save time.

Feature of The Medical Report & Rx Maker app:

- 1) Generate medical test reports with standard format.
- 2) Shows your total Test reports and his history.
- 3) Mobile-friendly layout for access on various devices, including tablets and smartphones.
- 4) You can add remarks, due date and time in your test.

2.4 Summary of Oxy Software:

For a variety of laboratory tests carried out in clinics, such as the CBC test, thyroid, kidney, and liver functions, the Oxy program is made to offer lab bills and results. The Oxy Software is compatible with traditional Windows-based setup methods. Software installation is a pretty simple procedure. Oxy Software has a special feature that allows us to create bills and reports in PDF format for printing. The customer has the option to store on their PC and plan to transmit over WhatsApp.

Oxy Software is simple to use and modify because to its built-in features. For instance, laboratories simply need to click once to establish their own letterhead logo, address, and contact details. Oxy Software offers tools for creating test reports and billing [5].

Feature of Oxy Software:

- 1) Easy Setup, more Flexibility.
- 2) Fast & Friendly Support.
- 3) It provides the facility for printing the reports and bills.
- 4) Cost Effective.
- 5) Customization facility
- 6) Provides Security and Privacy.

2.5 Summary of Flab Pathology Software:

The Flabs pathology software was created with both small and major centers' labs in mind. This program makes it simple for users to handle patient tasks including registration, automate lab analysis, and create reports that can be shared with patients via QR codes. By completing their login process, patients may effortlessly view and download their results from Flabs Pathology Software's patient dashboard. Patients may examine their data at any moment and take appropriate action based on this program, which helps them remain informed about their health [6].

Feature of Flab Pathology software:

- 1) Streamlined Lab Operations.
- 2) Enhanced Patient Experience.
- 3) Secure data backups and recovery options.
- 4) Provides patient login dashboard.

2.6 Summary of RX Easy Prescription Maker:

For busy physicians and other healthcare workers, Rx Easy Prescription Maker is a useful tool for organizing their everyday tasks. Users can create and manage tasks like writing prescriptions, keeping track of their calendar, and creating patient notes with ease because to its straightforward and user-friendly layout. Additionally, this program makes it simple to provide the highest caliber of treatment by enabling users to save and manage their patients' medical records. Every healthcare practitioner has to have the Rx Easy Prescription Maker installed, whether they work in a clinic, lab, or hospital.

Feature of Flab Pathology software:

- 1) User-friendly interface.
- 2) Share prescriptions with patients.
- 3) Modern way to print prescriptions.
- 4) Export and import of medicines and patient records.
- 5) Save patient data in excel file form.
- 6) Activated on an unlimited number of Android devices.
- 7) Flexibility.

2.7 Summary of LabSmart software:

Labsmart is an application program that makes it simple to create and distribute test results to physicians and patients. Reports may be sent to patients by email, SMS, and WhatsApp in addition to printing. In order to handle any issues while using the program, Labsmart offers online customer help. Lab results and invoices with UPI QR codes may be printed. By scanning the Bill QR code, patients may get their test findings. The patients may be given access to the created PDFs. In addition to its user-friendly features, Labsmart provides exceptional assistance to make running your company stress-free. In order to provide a dependable and safe service, Labsmart is using the newest technology.

Feature of LabSmart software:

- 1) Run on multiple computers
- 2) Access over phone anytime, anywhere.
- 3) Easy to operate
- 4) Online customer support

2.8 Summary of MyOPD ZIP-Prescription Maker: MyOPD ZIP is a comprehensive software program that helps handle a number of business or practice-related tasks, including scheduling, client administration, financial transactions, and other crucial features that are highly helpful for physicians managing patient information. All Android smartphones and a few Google Chromebooks can use it simultaneously. MyOPD ZIP makes it possible to collect and record all patient medical reports in full, save them in PDF format, and print them on blank paper, which is extremely helpful for quickly discovering all patient information and making choices.

2.9 Feature of MyOPD ZIP-Prescription Maker:

- 1) Makes it easy to access their records, prescriptions and schedule appointments.
- 2) Printing certificates and custom prescriptions with images for making the clinic look more professional.
- 3) Handle everything from patient records to payments.

- 4) Keeps safe records of patients from another and we don't lose important data.

2.10 Summary of Health Amaze:

The first Smart Pathology Laboratory Information Management System (LIMS) in India is called Health Amaze. Health Amaze's software is easy to use, which boosts its market demand. The Health Amaze offers feature support for automated computations using complex algorithms and enables smooth data input for test results. Health Amaze notifies clients via email or SMS that the reports are prepared for retrieval as soon as they are created. Additionally, reports may be easily shared with patients via WhatsApp or email, which enhances client convenience. Patients may easily scan and download their report PDFs digitally thanks to a special QR code that is included into the top of every laboratory report.[10]

Feature of Health Amaze software:

- 1) Online access to pathology reports
- 2) PDF Facility in single click.
- 3) Attractive and user-friendly software.
- 4) 24x7 service support.
- 5) Blazing fast onboarding of patients and quick Invoicing service

2.11 Summary of MYLAB Software:

3. The Laboratory Center uses a Windows-based program called MyLab Pathology Reporting Software. Pathology Lab is quite simple to use. The system is easier to operate and more user-friendly. The system is simple to use for anybody with a basic understanding of Windows, and they can produce eye-catching lab reports. My Lab's report generator software automates data integration, analysis, and formatting to make the process of creating clinical reports more efficient. It seeks to ensure adherence to healthcare standards while improving the accuracy and efficiency of lab operations. My Lab software has an eye-catching user interface (UI), the ability to send messages via an SMS gateway API during patient registration, the ability to add additional tests based on specifications, and even the ability to establish a formula for automatic value computation. Other capabilities offered by My Lab software include the ability to search for patients using their ID and cellphone number. [11]

Feature of MyLab Software:

- 1) On registration Patient will get Invoice / Bill after Registration.
- 2) Bar Code can be printed.
- 3) Different collection center can be defined in the software, Collection
- 4) Centre wise rate list can be maintained in the system.
- 5) Patient reports had different formats for Printing.
- 6) Reports can be exported to PDF format and send by email with a single click.

3.1 Summary of HELTHRAY Software:

Presenting our Healthray lab management software, which is intended to maximize efficiency and save expenses. Comprehensive data capture and customized templates are made possible by its sophisticated features and user-friendly interface. Easily create digital test reports and schedule appointments. By improving automation in laboratory processes, our solution guarantees effective operations and better patient-centered care. Your lab inventory's lifecycle management. With the help of Healthray pathology lab software, it really is a fantastic concept. The prompt actions are crucial, as are the push messages and alerts that trigger them. In addition to electronic billing with modernizing capabilities, pathology lab software may produce invoices more quickly. It's time to abandon the lengthy paper-based procedures and switch to digital reporting-based software, like Healthray pathology lab software. Use our free pathology lab software to avoid paying extra for installation. Although it requires some basic preparation, this platform is quite easy to set up and use. Pathology Reporting Software's Effect on Lab Development Additionally, these methods include interchange with other departments and scalability in terms of workflow management. [12]

Feature of HELTHRAY Software:

- 1) Quickly retrieve information.
- 2) Modern Billing.
- 3) Digital Reporting.

5. Objective

Methodology

5.1 DFD LEVEL-2:

- 1) The main objective of our project is to make efficient test management which is user friendly and at the same time powerful.
- 2) Maintain the tests records date-wise.
- 3) To produce an application which manages patient tests and allows lab technicians to share this test report on social media applications like Whatsapp, Email.
- 4) To generate a clinical test report.
- 5) To support better patient care by improving workflow efficiency and ensuring timely communication of test results, thereby increasing patient satisfaction and convenience.
- 6) To develop an attractive and user-friendly graphical interface that enhances interaction between lab technicians and the application, improving overall usability.

- 7) To simplify the billing process for patients by generating

5.2. Explanation:

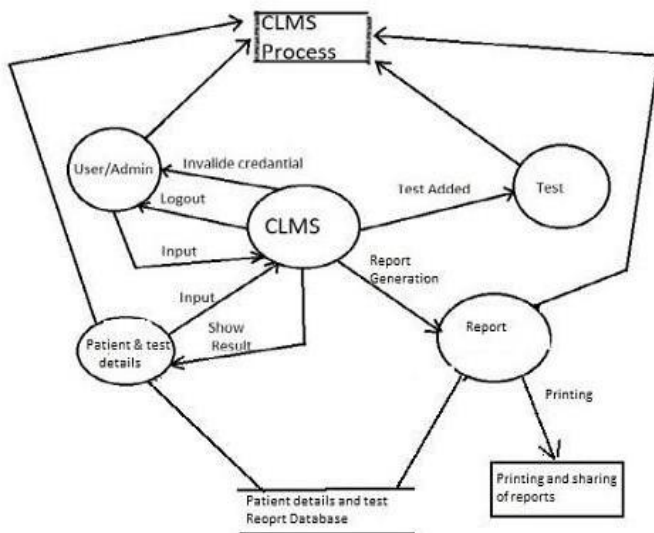

fig. DFD level-2

accurate bills based on tests performed, thereby improving financial transactions and transparency.

- 8) To allow lab technicians to update test prices easily based on market conditions or laboratory policies, ensuring flexibility in pricing management.

4. Problem Statements

5. The creation and administration of reports for different tests is a constant source of difficulty and annoyance for clinical labs. The existing procedures are often ineffective, which causes mistakes and delays in the diagnosis and treatment of patients. Healthcare workers' ability to effectively manage their jobs is hampered by the excessive complexity and significant human input required by many of the current systems. "Shree Clinical Laboratory Management," a simplified and effective Android application that produces laboratory test

results in PDF format, is desperately needed to solve these problems. Healthcare professionals may easily communicate these PDFs with patients via a variety of communication methods, such as email and messaging apps, thanks to this tool, which generates accurate reports quickly. This program seeks to enhance laboratory efficiency and provide better patient care by streamlining the reporting process and improving user-friendliness. Furthermore, the produced reports are safely kept for future use, making it simple for patients to access them whenever they're needed. This feature promotes trust between patients and their healthcare professionals in addition to facilitating patient interaction.

There are four to five actions in our Android application, "Shree Clinical Laboratory Management." The activity flows of our application are shown in the flow diagram above. The first task is to register for this application on the sign-up site.

Patient Details is the second action. The patient's information, including name, cellphone number, age, gender, and test selection, is included in this activity. Reporting details is the third activity. This produces a report in the appropriate format. Additionally, social media sites like Whatsapp and email may be used to distribute it. Maintaining the report history is the fourth task. We can keep all report data up to date in the database using this operation.

5.3 Modules and Functionality

Table 1. Modules & functionality

Modules	Functionality
Registration	Lab technician can register using user name, mobile number, email, password and lab name
Login	Lab Technicians can login to the application by using email and password.
Patients Details	Lab technician takes patients details like patient name, age, gender and mobile number
Sample test selection	Lab technicians can select tests according to patient requirements.
Report generation	After getting test data. It generates reports in proper format.
Report Sharing	Generated reports can be shared on social media platforms like Whatsapp and email.
Report history	Maintain report history date wise.
Bill generation	Generate bill as per total tests of patients.
Test price	Lab technicians can change the test price as per his perspective.

6. Results

1. Increase efficiency: This Android app uses automation to generate sample reports, which increases workflow productivity.
2. Improve data management: This program keeps track of the sample reports' date-wise history, simplifying the maintenance of patient information.
3. Simplify: This program simplifies sample handling. Additionally, lessens the complexity of invoicing administration.
4. Report sharing: This software allows patients to share reports via email and social media sites like Whatsapp.

8. Discussion

Application for Shree Clinical Laboratory Management with improved laboratory workflow management for advancement. By automating and outsourcing test management and reporting—a number of issues that often arise in conventional laboratory settings—the tool assists. In addition to making operations simple, having a real-time database on hand ensures that the data is constantly updated and readily accessible, which is essential for effectively providing patient care. More significantly, using the history tracking capability enables lab workers to provide comprehensive health trends that support well-reasoned therapeutic judgments.

9. Future extent Future improvements to the Shree Clinical Laboratory Management program might greatly simplify laboratory operations and boost patient care.
1. Electronic Health Record (EHR) Integration: Future iterations may easily interface with EHR systems, allowing labs and healthcare professionals to share data in real time for better patient care coordination.
2. Development of Mobile Applications: Creating a mobile version of the program would improve user accessibility and engagement by enabling lab staff and patients to easily access test results and reports.
3. Features of the Patient Portal: More patient engagement in their healthcare would arise from the creation of a dedicated patient portal that would enable individuals to examine test results, trace their medical history, and directly handle billing information.
6. Integration of Telehealth: Including telehealth features would improve communication by allowing lab workers and medical professionals to have video consultations to discuss test findings and suggestions.
7. configurable Reporting and Visualization Tools: Improving reporting tools to enable sophisticated data visualization and configurable templates might help healthcare professionals evaluate outcomes more successfully.
8. Security and Compliance Improvements: Sensitive patient data will be protected and confidence will be maintained by implementing features to guarantee compliance with local rules and improving data security measures.
9. Support for Multiple Languages: By including multilingual choices, the application may reach a wider audience and accommodate users who do not understand English.
11. Feedback and Enhancement System: By putting in place a method for user input, the application may be continuously improved depending on user demands and experiences.

The Shree Clinical Laboratory Management application may develop into a complete solution that greatly improves by concentrating on these next improvements.

9. Conclusion

10. In conclusion, "Shree Clinical Laboratory Management" is a development in the automation and digitalization of normal clinical laboratory procedures to reduce the burden required for patient data management and report preparation. This Android application addresses a number of problems that clinical labs face, such as the time-consuming process of creating and maintaining test results, as well as data security and accuracy. This reduces the possibility of human mistake in test result recording, expedites order turnaround in a fraction of the time, and eliminates all pre-manual labor, allowing lab professionals to focus on patient care and precise testing. Sensitive patient data is really saved by the program using a real-time database. Patients may get test reports after they have been generated in PDF format. Patients may download reports in PDF format and distribute them immediately via email or social media, which is a premium method for them as they may be the primary recipients who anticipate easier access to their medical records. It has a feature for managing user accounts, such as the ability to log in, log out, and delete the account. This allows access control, making the app more secure so that only authenticated users can access it. Additionally, you want your other members to not read or alter your records without your knowledge. The software is a crucial tool that was created with flexibility and compliance in mind, particularly the cost for laboratories per test. "Shree Clinical Laboratory Management" is an elevated landmark in laboratory management applications, offering Clinical Diagnostics Laboratories a simple, seamless managed all-in-one solution to streamline workflows and essential tools required in managing tests & reports more effectively. This app undoubtedly increases operational effectiveness along with the standards of care given to a patient.
